

Skyocean

Global Commodity Trading & Supply Chain Finance

Physical Trading | Verified Supply Chains | Global Payment Connectivity

March 2026 | Confidential

Executive Summary

Skyocean is a global commodity trading platform that buys, ships, and sells physical goods. We connect merchants and retail buyers directly to verified supply chains. Our hybrid platform serves both crypto and non-crypto users through any payment method worldwide.

MVP Live

Platform Status

5–8%+

Margin Per Trade

Conservative est. (45–60 day cycle)

Hybrid

Platform Model

Crypto & non-crypto users

15 yrs

Founder Experience

Commodity trading operations

Platform Highlights

- ✓ MVP live — accepting merchants & investors
- ✓ Hybrid platform — crypto and traditional users
- ✓ Global payment connectivity — any method, any region
- ✓ Direct merchant access — retail & wholesale

Key Partnerships

- ➔ **Government of Sudan** Essential commodity imports
- ➔ **Port of Thessaloniki (ThPA)** EU logistics gateway
- ➔ **World Trade Center Accra** Ghana trade corridor

How It Works

Skyocean owns the commodity at every stage. Merchants and retail buyers access goods directly through our platform.

1

Buyer Orders

Merchant or retail buyer places order directly on platform.

2

We Procure & Ship

Skyocean buys the commodity. We retain title throughout.

3

Verified Delivery

Quality inspection.
Digital verification.
Payment on delivery.

4

Returns Generated

Trade margin earned.
Capital recycled to next trade cycle.

Traditional Trade Finance

Bank lends money → charges interest → borrower repays or defaults → bank loses everything. Requires 150%+ collateral. 30–45 day processing.

Skyocean Model

We buy the commodity → ship to buyer → buyer pays trade price → if buyer defaults, we resell. No lending, no interest, no collateral. Goods are the collateral.

The Problem We Solve

\$2.6 trillion trade finance gap | 70% first-time applicants rejected | 40% rejection rate in Africa

Why Banks Can't Close the Gap

- ✗ No supply chain visibility — betting on strangers
- ✗ Usury caps (8–15%) make risky trades unprofitable
- ✗ Credit assessment costs exceed profit on small deals
- ✗ Binary outcome: borrower pays or total loss
- ✗ Cannot price high-risk markets appropriately
- ✗ Seller payment gaps from buyer defaults

Skyocean's Approach

- ✓ We own the commodity — full supply chain control
- ✓ Pricing through trade margin, not interest rates
- ✓ Self-consignment eliminates buyer credit risk
- ✓ Buyer defaults? We resell to next buyer
- ✓ Digitally verified supply chain data for all parties
- ✓ Direct merchant access — no intermediaries needed

Verification Technology

Every shipment is digitally verified. Documents are tamper-proof. Payments release automatically when conditions are met.

Document Verification

Every document (bill of lading, quality inspection, customs clearance) gets a unique digital fingerprint. Cannot be forged, altered, or disputed. Verified in seconds, not weeks.

Decentralized Data Storage

Trade data is stored across multiple independent nodes worldwide — not on our servers. No single point of failure. No one can alter records. Enterprise-grade technology used by Walmart, Swiss Railways, and major logistics companies.

Automated Settlement

Payments release automatically when verified milestones are confirmed: goods shipped, quality inspected, customs cleared, delivery confirmed. No manual intervention. No disputes.

Why It Matters

2 sec

verification vs 5–10 days at banks

\$0.02

per verification vs \$500+ bank fees

0%

document fraud — mathematically impossible

24/7

global operation — no office hours

100%

audit trail — every action recorded

Hybrid Platform
Crypto & non-crypto users
Same verification, same trust

Global Platform & Payments

Merchants and retail buyers access goods directly. We connect to any payment system used in any region worldwide.

Who Uses the Platform

→ Retail Merchants

SME buyers place orders directly on the platform for commodities at fair market prices. Full KYC onboarding, order tracking, document access.

→ Wholesale Buyers

Government agencies, cooperatives, and large importers access bulk commodities with verified quality and full supply chain transparency.

→ Investors & Capital Partners

Participate in trade financing through the platform. Earn returns from real commodity trade margins on 45–60 day cycles.

Global Payment Connectivity

- ✓ Bank transfers (SWIFT, SEPA, local rails)
- ✓ Mobile money (M-Pesa, MTN, Airtel, etc.)
- ✓ Cash against documents (CAD)
- ✓ Letter of credit (LC)
- ✓ Digital stablecoin settlement (optional)
- ✓ Gold-backed payment (select markets)
- ✓ Multi-currency support (USD, EUR, GHS, etc.)

Hybrid Platform — Built for Everyone

Non-Crypto Users

Use bank transfers, mobile money, or cash. No wallets, no seed phrases needed.

Crypto-Native Users

Use digital wallets, stablecoin settlement, on-chain verification. Full transparency.

Same Platform, Same Trust

Both paths get identical verification, same supply chain data, same protections.

Pilot Program — Trade Corridors

Initial corridors to prove the model. The platform is global — pilot numbers represent launch phase only.

SUDAN — Flagship Pilot Corridor

Commodity	Volume	Value	Source
Wheat / Flour	10,000 MT	~\$4M	Turkey
Sugar	10,000 MT	~\$4M	Brazil
Milk Powder	20 containers	~\$1M	Poland
Sunflower Oil	40 containers	~\$1.2M	Turkey
Lentils / Pasta	Mixed	~\$1.3M	Turkey/Italy

Pilot cycle: ~\$14–16M per cycle

Gov't demand: 30,000 MT wheat/month (~\$12M/mo)

Partnership: Ministry of Investment, Republic of Sudan

Status: Government partnership, LOI in progress

GHANA — Diversification Corridor

Commodity	Value	Source
Dairy / Milk Powder	~\$1M	Poland
Chicken / Poultry	~\$1M	Brazil / EU
Sugar	~\$4M	Brazil

Pilot cycle: ~\$7M | 0% tariff under EU–Ghana EPA

Lower risk — established port (Tema), proven trade route

EU Gateway

Port of Thessaloniki — shortest transit to East Africa.
Sofia Dry Port for rail consolidation to Central Europe.

Business Model & Revenue

Trade Margins

5–8%+

Conservative estimate per trade. We buy commodities at origin and sell at destination. Multiple cycles per year multiply annualized returns significantly.

Transaction Fees

1.5–2.5%

Platform fee per trade. Covers KYC verification, data integrity, document processing, and settlement infrastructure.

Capital Participation

3–4%/cycle

Investors earn returns per trade cycle (45–60 days). Multiple cycles per year. Backed by real commodities, not speculation.

Annualized Returns: 5–8% margin per trade × 6–8 cycles/year = **30–60%+ annualized returns on deployed capital.** Pilot program data from Sudan projects 15–25% per trade in high-demand markets.

Pilot Program Revenue Projections (Initial Corridors Only)

Period	Trade Volume	Trades	Revenue Est.	Milestone
Year 1 — Pilot	\$40M	4–6	\$1–1.6M	First trades, prove margins, build track record
Year 2 — Scale	\$120M	12–15	\$3.3–5.5M	Multi-corridor, 5–7 countries, expand pipeline
Year 3 — Expand	\$175–200M	18–25	\$8.8–12.3M	Institutional partners, new regions, full scale

initial target regions

Commodity Focus: Agricultural Products | Essential Goods (FMCG) | Industrial Equipment | Construction Materials | Containerised Cargo

Global Platform — Pilot Numbers Represent Launch Phase Only

Pilot corridors (Sudan + Ghana): \$21–23M confirmed pipeline, first cycle. Sudan government demand: 30,000 MT wheat/month (~\$12M/month). Pipeline is institutional-scale — execution is capital-constrained, not demand-constrained.

Global platform: Pilot success validates expansion to LATAM, Asia, and additional African markets. Capital scales directly into volume.

Competitive Positioning

Capability	Skyocean	Drip Capital	Centrifuge	Banks
Quick SME Financing	✓	✓	✗	✗
Owns the Supply Chain	✓	✗	✗	✗
Earns Trade Margins (not interest)	✓	✗	✗	✗
Digital Verification & Transparency	✓	✗	✓	✗
Lower Collateral Requirements	✓	✓	✗	✗
No Interest Charged to SMEs	✓	✗	✗	✗
Global Payment Connectivity	✓	✗	✗	✓
Direct Merchant Access	✓	✗	✗	✗
Hybrid (Crypto & Non-Crypto)	✓	✗	✓	✗

Key Differentiator: Competitors either lend capital (Drip Capital, banks) or facilitate others' financing (Centrifuge). Skyocean owns the commodity, controls the supply chain, and earns margin from trading — not interest. Failed platforms (TradeLens, Marco Polo, we.trade) didn't own the value chain. We do.

Risk Management

Buyer Default

Self-consignment: Skyocean retains title to goods. Buyer defaults = goods resold to next buyer. No capital loss.

Security (Sudan)

Port Sudan under SAF control. War risk + marine cargo insurance. Egypt backup route verified. First-come-first-serve model.

Commodity Price

Short cycles (45–60 days). Essential goods with stable demand (wheat, sugar, dairy). Minimal price exposure window.

Financial / FX

All contracts USD-denominated. No local currency exposure. Gold accepted as alternative in select markets.

Quality / Dispute

Pre-shipment inspection (SGS/Bureau Veritas). Independent surveyor. ICC arbitration clause. Digital verification.

Sanctions

Food/essential goods exempt from most sanctions. Rigorous KYC/KYB on all parties. SDN list screening. Full compliance framework.

Insurance: Marine Cargo ~1.5% + War Risk ~3% + Warehouse ~0.5% = ~5% of cargo value (fully covered)

Roadmap

Q2 2026

Launch

- ✓ MVP live with first trade cycles
- ✓ Pilot program — Sudan & Ghana corridors
- ✓ First revenue from trading operations
- ✓ Active fundraising (pre-seed)

Q4 2026

Scale

- ✓ ~\$40M trade pipeline active
- ✓ Multiple corridors operational
- ✓ Technology infrastructure scaled
- ✓ EU regulatory compliance

Q3 2027

Expand

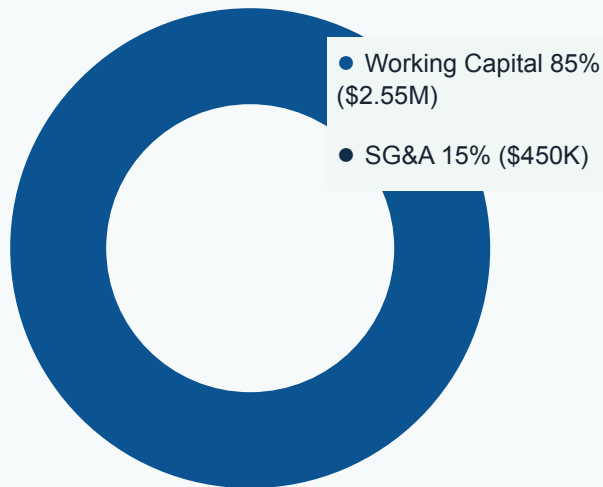

- ✓ Full pipeline scale (\$120M+)
- ✓ Africa + LATAM corridors
- ✓ Institutional partnerships
- ✓ B2B yield platform integration

Use of Funds & Investment

Pre-Seed Round

\$3M Target | \$15M Pre-Money Valuation

Bootstrapped to date | Founder-owned

Equity Tiers at \$15M Pre-Money

\$150K = 1.0% equity

\$250K = 1.6% equity

\$500K = 3.2% equity

\$750K = 4.8% equity

\$1.0M = 6.3% equity

Why Now

- ✓ MVP live — platform operational today
- ✓ Government partnership signed
- ✓ Pilot pipeline ready — real demand confirmed
- ✓ Global payment connectivity built
- ✓ Trading company profitable from Year 1
- ✓ Pre-seed pricing — Series A won't be at this valuation.

Let's Talk

Skyocean is bridging the \$2.6 trillion trade finance gap by doing what banks can't: owning the commodity, controlling the supply chain, and sharing the profits with investors. Our global platform connects merchants and retail buyers directly — through any payment method, in any market.

Next Steps

- 1 Introductory meeting** — Discuss corridors, model, pipeline
- 2 Structure discussion** — Equity, trade finance, or hybrid
- 3 Due diligence** — Full data room access, platform demo
- 4 Term sheet** — Commercial terms, governance
- 5 First trade** — Capital deployed, trade cycle begins
