Skyocean

Global Commodity Trading & Supply Chain Finance

Physical Trading | Verified Supply Chains | Global Payment Connectivity

March 2026 | Confidential

Executive Summary

Skyocean is a global commodity trading platform that buys, ships, and sells physical goods. We connect merchants and retail buyers directly to verified supply chains. Our hybrid platform serves both crypto and non-crypto users through any payment method worldwide.

MVP Live

Platform Status

Operational & accepting users

5–8%+

Margin Per Trade

Conservative est. (45–60 day cycle)

Hybrid

Platform Model

Crypto & non-crypto users

15 yrs

Founder Experience

Commodity trading operations

Platform Highlights

- MVP live — accepting merchants & investors
- Hybrid platform — crypto and traditional users
- Global payment connectivity — any method, any region
- Direct merchant access — retail & wholesale

Key Partnerships

- **Government of Sudan** Essential commodity imports
- **Port of Thessaloniki (ThPA)** EU logistics gateway
- **World Trade Center Accra** Ghana trade corridor

How It Works

Skyocean owns the commodity at every stage. Merchants and retail buyers access goods directly through our platform.

1

Buyer Orders

Merchant or retail buyer places order directly on platform.

→

2

We Procure & Ship

Skyocean buys the commodity. We retain title throughout.

→

3

Verified Delivery

Quality inspection. Digital verification. Payment on delivery.

→

4

Returns Generated

Trade margin earned. Capital recycled to next trade cycle.

Traditional Trade Finance

Bank lends money → charges interest → borrower repays or defaults → bank loses everything. Requires 150%+ collateral. 30–45 day processing.

Skyocean Model

We buy the commodity → ship to buyer → buyer pays trade price → if buyer defaults, we resell. No lending, no interest, no collateral. Goods are the collateral.

The Problem We Solve

$2.6 trillion trade finance gap | 70% first-time applicants rejected | 40% rejection rate in Africa

Why Banks Can't Close the Gap

- No supply chain visibility — betting on strangers
- Usury caps (8–15%) make risky trades unprofitable
- Credit assessment costs exceed profit on small deals
- Binary outcome: borrower pays or total loss
- Cannot price high-risk markets appropriately
- Seller payment gaps from buyer defaults

Skyocean's Approach

- We own the commodity — full supply chain control
- Pricing through trade margin, not interest rates
- Self-consignment eliminates buyer credit risk
- Buyer defaults? We resell to next buyer
- Digitally verified supply chain data for all parties
- Direct merchant access — no intermediaries needed

Verification Technology

Every shipment is digitally verified. Documents are tamper-proof. Payments release automatically when conditions are met.

Document Verification

Every document (bill of lading, quality inspection, customs clearance) gets a unique digital fingerprint. Cannot be forged, altered, or disputed. Verified in seconds, not weeks.

Decentralized Data Storage

Trade data is stored across multiple independent nodes worldwide — not on our servers. No single point of failure. No one can alter records. Enterprise-grade technology used by Walmart, Swiss Railways, and major logistics companies.

Automated Settlement

Payments release automatically when verified milestones are confirmed: goods shipped, quality inspected, customs cleared, delivery confirmed. No manual intervention. No disputes.

Why It Matters

2 sec
verification vs 5–10 days at banks

$0.02
per verification vs $500+ bank fees

0%
document fraud — mathematically impossible

24/7
global operation — no office hours

100%
audit trail — every action recorded

Hybrid Platform
Crypto & non-crypto users
Same verification, same trust

Global Platform & Payments

Merchants and retail buyers access goods directly. We connect to any payment system used in any region worldwide.

Who Uses the Platform

Retail Merchants

SME buyers place orders directly on the platform for commodities at fair market prices. Full KYC onboarding, order tracking, document access.

Wholesale Buyers

Government agencies, cooperatives, and large importers access bulk commodities with verified quality and full supply chain transparency.

Investors & Capital Partners

Participate in trade financing through the platform. Earn returns from real commodity trade margins on 45–60 day cycles.

Global Payment Connectivity

- Bank transfers (SWIFT, SEPA, local rails)
- Mobile money (M-Pesa, MTN, Airtel, etc.)
- Cash against documents (CAD)
- Letter of credit (LC)
- Digital stablecoin settlement (optional)
- Gold-backed payment (select markets)
- Multi-currency support (USD, EUR, GHS, etc.)

Hybrid Platform — Built for Everyone

Non-Crypto Users
Use bank transfers, mobile money, or cash. No wallets, no seed phrases needed.

Crypto-Native Users
Use digital wallets, stablecoin settlement, on-chain verification. Full transparency.

Same Platform, Same Trust
Both paths get identical verification, same supply chain data, same protections.

Pilot Program — Trade Corridors

Initial corridors to prove the model. The platform is global — pilot numbers represent launch phase only.

SUDAN — Flagship Pilot Corridor

Commodity	Volume	Value	Source
Wheat / Flour	10,000 MT	~$4M	Turkey
Sugar	10,000 MT	~$4M	Brazil
Milk Powder	20 containers	~$1M	Poland
Sunflower Oil	40 containers	~$1.2M	Turkey
Lentils / Pasta	Mixed	~$1.3M	Turkey/Italy

Pilot cycle: ~$14–16M per cycle

Gov't demand: 30,000 MT wheat/month (~$12M/mo)

Partnership: Ministry of Investment, Republic of Sudan

Status: Government partnership, LOI in progress

GHANA — Diversification Corridor

Commodity	Value	Source
Dairy / Milk Powder	~$1M	Poland
Chicken / Poultry	~$1M	Brazil / EU
Sugar	~$4M	Brazil

Pilot cycle: ~$7M | 0% tariff under EU–Ghana EPA

Lower risk — established port (Tema), proven trade route

EU Gateway

Port of Thessaloniki — shortest transit to East Africa.
Sofia Dry Port for rail consolidation to Central Europe.

Business Model & Revenue

Trade Margins

5–8%+

Conservative estimate per trade. We buy commodities at origin and sell at destination. Multiple cycles per year multiply annualized returns significantly.

Transaction Fees

1.5–2.5%

Platform fee per trade. Covers KYC verification, data integrity, document processing, and settlement infrastructure.

Capital Participation

3–4%/cycle

Investors earn returns per trade cycle (45–60 days). Multiple cycles per year. Backed by real commodities, not speculation.

Annualized Returns: 5–8% margin per trade × 6–8 cycles/year = **30–60%+ annualized returns on deployed capital.** Pilot program data from Sudan projects 15–25% per trade in high-demand markets.

Pilot Program Revenue Projections (Initial Corridors Only)

Period	Trade Volume	Trades	Revenue Est.	Milestone
Year 1 — Pilot	$40M	4–6	**$1–1.6M**	First trades, prove margins, build track record
Year 2 — Scale	$120M	12–15	**$3.3–5.5M**	Multi-corridor, 5–7 countries, expand pipeline
Year 3 — Expand	$175–200M	18–25	**$8.8–12.3M**	Institutional partners, new regions, full scale

Commodity Focus: Agricultural Products | Essential Goods (FMCG) | Industrial Equipment | Construction Materials | Containerised Cargo

Global Platform — Pilot Numbers Represent Launch Phase Only

Pilot corridors (Sudan + Ghana): $21–23M confirmed pipeline, first cycle. Sudan government demand: 30,000 MT wheat/month (~$12M/month). Pipeline is institutional-scale — execution is capital-constrained, not demand-constrained.

Global platform: Pilot success validates expansion to LATAM, Asia, and additional African markets. Capital scales directly into volume.

Competitive Positioning

Capability	Skyocean	Drip Capital	Centrifuge	Banks
Quick SME Financing	✓	✓	✗	✗
Owns the Supply Chain	✓	✗	✗	✗
Earns Trade Margins (not interest)	✓	✗	✗	✗
Digital Verification & Transparency	✓	✗	✓	✗
Lower Collateral Requirements	✓	✓	✗	✗
No Interest Charged to SMEs	✓	✗	✗	✗
Global Payment Connectivity	✓	✗	✗	✓
Direct Merchant Access	✓	✗	✗	✗
Hybrid (Crypto & Non-Crypto)	✓	✗	✓	✗

Key Differentiator: Competitors either lend capital (Drip Capital, banks) or facilitate others' financing (Centrifuge). Skyocean owns the commodity, controls the supply chain, and earns margin from trading — not interest. Failed platforms (TradeLens, Marco Polo, we.trade) didn't own the value chain. We do.

Risk Management

Buyer Default

Self-consignment: Skyocean retains title to goods. Buyer defaults = goods resold to next buyer. No capital loss.

Security (Sudan)

Port Sudan under SAF control. War risk + marine cargo insurance. Egypt backup route verified. First-come-first-serve model.

Commodity Price

Short cycles (45–60 days). Essential goods with stable demand (wheat, sugar, dairy). Minimal price exposure window.

Financial / FX

All contracts USD-denominated. No local currency exposure. Gold accepted as alternative in select markets.

Quality / Dispute

Pre-shipment inspection (SGS/Bureau Veritas). Independent surveyor. ICC arbitration clause. Digital verification.

Sanctions

Food/essential goods exempt from most sanctions. Rigorous KYC/KYB on all parties. SDN list screening. Full compliance framework.

Insurance: Marine Cargo ~1.5% + War Risk ~3% + Warehouse ~0.5% = ~5% of cargo value (fully covered)

Roadmap

Q2 2026
Launch

- MVP live with first trade cycles
- Pilot program — Sudan & Ghana corridors
- First revenue from trading operations
- Active fundraising (pre-seed)

Q4 2026
Scale

- ~$40M trade pipeline active
- Multiple corridors operational
- Technology infrastructure scaled
- EU regulatory compliance

Q3 2027
Expand

- Full pipeline scale ($120M+)
- Africa + LATAM corridors
- Institutional partnerships
- B2B yield platform integration

Use of Funds & Investment

Pre-Seed Round

$2M Target | $15M Pre-Money Valuation

Bootstrapped to date | Founder-owned

Equity Tiers at $15M Pre-Money

$150K	= 1.0% equity
$250K	= 1.6% equity
$500K	= 3.2% equity
$750K	= 4.8% equity
$1.0M	= 6.3% equity

Why Now

- MVP live — platform operational today
- Government partnership signed
- Pilot pipeline ready — real demand confirmed
- Global payment connectivity built
- Trading company profitable from Year 1
- Pre-seed pricing — Series A won't be at this valuation.

Revenue projections based on analysis and assumptions. Actual results may vary. Consultation with financial experts is advised.

Let’s Talk

Skyocean is bridging the $2.6 trillion trade finance gap by doing what banks can’t: owning the commodity, controlling the supply chain, and sharing the profits with investors. Our global platform connects merchants and retail buyers directly — through any payment method, in any market.

Next Steps

1. **Introductory meeting** — Discuss corridors, model, pipeline
2. **Structure discussion** — Equity, trade finance, or hybrid
3. **Due diligence** — Full data room access, platform demo
4. **Term sheet** — Commercial terms, governance
5. **First trade** — Capital deployed, trade cycle begins
