

Skyocean

Global Commodity Trading & Supply Chain Finance

Physical Trading · Verified Supply Chains · Controlled Settlement

September 2026

Executive Summary

Skyocean is a global commodity trading platform that buys, ships, and sells physical goods. We connect merchants and buyers directly to verified supply chains through **a platform that settles each trade under the payment terms of its sales contract.**

Platform Built

Platform Status

Live and tested. The first production trade under real counterparty names follows the first funded trade.

5 to 8%+

Margin Per Trade

Conservative est. (45 to 75 day cycle)

\$21 to 23M

Pilot Pipeline

Identified demand, first cycle

15 yrs

Founder Experience

Commodity trading operations

Platform Highlights

- ✓ **Platform live and tested**, open to merchants and institutional financiers
- ✓ **Owns the commodity end to end**, full supply chain control
- ✓ **Skyocean settles by bank transfer**, cash against documents or letter of credit
- ✓ **Direct merchant access**, SME and wholesale
- ✓ **Full reference audit published**, open to inspection at audit.skyocean.io

Corridor Framework and Access

Investment Encouragement Commission, Republic of Sudan

Three year MOU signed 2 April 2026

Skyocean Sudan

Consignee and importer of record in the destination market

Skyocean Lithuania

European base and contracting entity for EU financiers

How It Works

Skyocean owns the commodity at every stage. Merchants and buyers access goods directly through our platform.

1

Buyer Orders

Merchant or buyer places an order directly on the platform.

2

We Procure & Ship

Skyocean buys the commodity. We retain title throughout.

3

Verified Delivery

Quality inspection. Digital verification. Cargo released against payment.

4

Returns Generated

Trade margin earned. Capital recycled to the next trade cycle.

Traditional Trade Finance

A bank lends against the borrower's balance sheet and prices the corridor by country. On a small trade in a frontier market, assessing the individual transaction costs more than the trade earns, so the bank declines it.

Skyocean Model

Skyocean buys the commodity and holds title until the buyer pays. If the buyer defaults, Skyocean resells the cargo, so a buyer default is a resale, not a claim. Skyocean does not lend to buyers or charge them interest. A financier funds the cargo under a Trade Finance Agreement.

The Problem We Solve

\$2.5 trillion

global trade finance gap

70%

of first-time applicants rejected

40%

rejection rate in Africa

Why Banks Cannot Close the Gap

- ✗ No supply chain visibility, betting on strangers
- ✗ Usury caps (8 to 15%) make risky trades unprofitable
- ✗ Credit assessment costs exceed profit on small deals
- ✗ Recovery rests on the borrower rather than on the goods
- ✗ Cannot price high-risk markets appropriately
- ✗ Seller payment gaps from buyer defaults

Skyocean's Approach

- ✓ We own the commodity, full supply chain control
- ✓ Pricing through trade margin, not interest rates
- ✓ Retained title turns a buyer default into a resale
- ✓ Digitally verified supply chain data for all parties
- ✓ Direct merchant access, no intermediaries needed

Verification Technology

Skyocean cross-checks each shipment's documents against each other and against the authorities that issued them. Each record is anchored, so a later change to it shows. The destination entity releases the cargo against payment into the controlled account named in the Trade Finance Agreement.

Document Verification

Skyocean fingerprints each document, such as a bill of lading, quality inspection or customs clearance, when it is recorded, and any later change breaks the fingerprint. Whether the document was genuine when issued is checked against the authority that issued it.

Independent, Anchored Records

Records are cross-checked against sources outside Skyocean's control, and each one is bound to the identifier of the party that issued it.

Controlled Settlement

The buyer pays into a collection account charged to the financier. The destination entity releases the cargo against that payment, as the Trade Finance Agreement sets out.

Why It Matters

8 independent attestors, each attestation anchored so Skyocean cannot alter it afterwards

24/7 global operation, no office hours

- Every action recorded, with who did it and when

Go And Check It Yourself

Every other page in this deck is a claim. This one is published and open.

131 checks

across 15 axes

130 passed

1 discrepancy, disclosed on the report

8 authorities

independent attestors, outside our control

0.95

verification strength

What was audited

A complete commodity trade, end to end. 44 knowledge assets across five categories: subject, parties, documents, attestations and reconciliation. 20 attestations from 8 independent attestors including the port terminal, the customs authority, the ocean carrier, the inspector, the insurer and the settlement banks. EUR 3.2M corridor value.

Why it can be trusted

No machine learning anywhere in the audit path. Every check is deterministic and anchored in a public chain, so anyone with access can recompute the verdict rather than accept ours. The full machine record is retained for exactly that purpose.

Reference audit on sanitised data: a real trade structure with parties and figures substituted. It demonstrates the method, not a completed commercial transaction.

audit.skyocean.io · No account, no login, no request. Open now.

Global Platform & Payments

Merchants and buyers access goods directly. Skyocean settles each trade under the payment terms of its sales contract.

Who Uses the Platform

SME Merchants

SME buyers place orders directly on the platform for commodities at fair market prices. Full KYC onboarding, order tracking, document access.

Wholesale Buyers

Government agencies, cooperatives, and large importers access bulk commodities with verified quality and full supply chain transparency.

Financiers

Financiers fund named cargoes, per trade or as a revolving facility, under a Trade Finance Agreement. Trade cycles run 45 to 75 days from cash out to cash in.

Settlement Methods

- Bank transfers (SWIFT, SEPA, local rails)
- Cash against documents (CAD)
- Letter of credit (LC)
- Multi-currency support (USD, EUR, GHS, etc.)

How Capital Participates

Four entry points. Every option is backed by physical commodity trades and the same verification and reporting.

01

Trade Finance

Fund real, secured trades directly. Structure it per trade, a single cargo on a 45 to 75 day cycle, or as a longer-term revolving facility across many cycles. Open to any institution or financier. The Skyocean borrower holds title to the goods, and the financier is repaid from the controlled account as each trade completes. See What Secures a Financed Trade.

02

Equity

A shareholding in Skyocean Lithuania through the pre-seed round, and in no other group company. Longest horizon.

03

Yield Engine

For licensed securities firms. We deliver the trade finance yield into a structured product the firm wraps and distributes to its own investors under its licence. Skyocean does not distribute to retail investors or solicit the public.

04

Yield Provider Partnerships

Skyocean partners with licensed securities firms that originate and hold the client relationship. The partner distributes to its own clients under its own licence.

Structures can combine: equity plus trade finance in a single allocation, sized to the investor's mandate.

What Secures a Financed Trade

Who owns it

The Skyocean entity that signs the Trade Finance Agreement, in the financier's own jurisdiction: Skyocean USA for a US financier, Skyocean Lithuania for an EU financier. It buys the cargo, owns it and the receivable, and is the borrower.

Who holds it

The destination entity, Skyocean Sudan or Skyocean Ghana, as consignee and importer of record. It holds the original bills of lading, clears the cargo, releases it against payment, and resells it if the buyer defaults, acting as agent for the borrower under an intercompany agency agreement that is notarised, consular legalised and registered in the destination country before the first financed cargo.

What the financier holds

A charge over the goods and receivables that follows the goods into their sale proceeds

The assignment of receivables and resale proceeds

The collection account the buyer pays into, charged to the financier

A direct suretyship from the destination entity

Cargo insurance as loss payee

Transport documents to its order where it requires that

If the cargo is not released

It can be held in a bonded warehouse at the port of discharge, under customs control, where import duty falls due only on clearance. From bond it is cleared by the buyer on payment, cleared by a replacement buyer after a resale under retained title, sold in bond to a buyer who clears it, or exported onward. Every exit is screened like the original buyer and paid into the same controlled account.

What the record adds

Legalisation, registration and the legal opinion decide whether the charge is enforceable. The record decides whether the facts they rest on can be shown: which containers, held by which entity for which principal, charged to which financier, since when. The schedule binding a named cargo is signed and its hash published before departure, and the terminal's gate report and the customs declaration for the same containers and seals are matched against it.

Pilot Program: Trade Corridors

Sudan and Ghana are equal parts of the pilot, chosen because they are among the hardest markets to access. Discussions are open on further African corridors, Nigeria and Senegal among them. The same model transfers to easier corridors without modification.

SUDAN: Pilot Corridor

Commodity	Volume	Value	Source
Wheat / Flour	10,000 MT	~\$4M	Turkey
Sugar	10,000 MT	~\$4M	Brazil
Milk Powder	20 containers	~\$1M	Poland
Sunflower Oil	40 containers	~\$1.2M	Turkey
Lentils / Pasta	Mixed	~\$1.3M	Turkey / Italy

Pilot cycle: ~\$14 to 16M per cycle

Identified government demand: 30,000 MT wheat per month (about \$12M per month)

Framework: three year MOU with the Investment Encouragement Commission of the Republic of Sudan, signed 2 April 2026

Status: MOU signed. A framework for market access, not a purchase contract or payment obligation.

GHANA: Pilot Corridor

Commodity	Value	Source
Dairy / Milk Powder	~\$1M	Poland
Chicken / Poultry	~\$1M	Brazil / EU
Sugar	~\$4M	Brazil

Pilot cycle: ~\$7M · 0% tariff under EU-Ghana EPA

Established port (Tema), proven trade route

EU Gateway & Next Corridors

Port of Thessaloniki, the shortest transit to East Africa. Sofia Dry Port for rail to Central Europe. Nigeria and Senegal in discussion. Further corridors require local registration as a general commodity trader and compliance with that jurisdiction.

Business Model & Revenue

Trade Margins

5 to 8%+

Conservative estimate per trade. We buy at origin and sell at destination.

Transaction Fees

1.5 to 2.5%

Platform fee per trade. Covers KYC verification, data integrity, document processing, and settlement infrastructure.

Capital Participation

Priced per facility

Each Trade Finance Agreement sets the pricing, advance rate and tenor, per trade or for a revolving facility.

Indicative Target

Licensed firms only: Sudan 16 to 21 percent, Ghana about 15 percent, gross annualised, derived from trade margins on these corridors. Not an offer, a projection or a commitment to any return.

Pilot Program Revenue Projections (Initial Corridors Only)

Period	Trade Volume	Trades	Revenue Est.	Milestone
Year 1: Pilot	\$40M	4 to 6	\$1 to 1.6M	First trades, prove margins, build track record
Year 2: Scale	\$120M	12 to 15	\$3.3 to 5.5M	Multi-corridor, 5 to 7 countries, expand pipeline
Year 3: Expand	\$175 to 200M	18 to 25	\$8.8 to 12.3M	Institutional partners, new regions, full scale

Projections are based on analysis and assumptions, and actual results may differ.

Market Opportunity

\$2.5T TAM

Global SME trade finance gap. ICC Banking Commission 2024.

\$260B SAM

EU and emerging market corridors addressable from our platform.

\$52 to 65B SOM

Africa and EU corridors, initial target regions.

Commodity Focus:

Agricultural Products

Essential Goods (FMCG)

Industrial Equipment

Construction Materials

Containerised Cargo

Global Platform: Pilot Numbers Represent the Launch Phase Only

Pilot corridors (Sudan + Ghana): \$21 to 23M identified demand, first cycle. Identified Sudan government demand: 30,000 MT wheat per month (about \$12M per month). The pipeline is institutional-scale; execution is capital-constrained, not demand-constrained.

Global platform: Pilot success validates expansion to LATAM, Asia, and additional African markets. Capital scales directly into volume.

Competitive Positioning

Capability	Skyocean	Drip Capital	Banks
Quick SME Financing	✓	✓	✗
Owns the Supply Chain	✓	✗	✗
Earns Trade Margins (not interest)	✓	✗	✗
Digital Verification & Transparency	✓	✗	✗
No SME Collateral Required	✓	✓	✗
No Interest Charged to SMEs	✓	✗	✗
Direct Merchant Access	✓	✗	✗

Key Differentiator: Competitors either lend capital (Drip Capital, banks) or run platforms that never take ownership of the goods. Skyocean owns the commodity, controls the supply chain, and earns margin from trading, not interest. Failed platforms (TradeLens, Marco Polo, we.trade) did not own the value chain. We do.

Risk Management

Buyer Default

Title stays with the Skyocean borrower and the cargo is held by the Skyocean entity that can clear and resell it. A buyer default is a resale, not a claim. See What Secures a Financed Trade.

Security (Sudan)

Cleared, operational port access under current authorities. War risk plus marine cargo insurance. Egypt backup route identified. First-come-first-serve model.

Commodity Price

Short cycles (45 to 75 days). Essential goods with stable demand (wheat, sugar, dairy). Minimal price exposure window.

Financial / FX

Each sales contract sets its currency. Sudan trades settle in USD into a Gulf account.

Quality / Dispute

Pre-shipment inspection (SGS / Bureau Veritas). Independent surveyor. ICC arbitration clause. Digital verification.

Sanctions

Food and essential goods exempt from most sanctions. Rigorous KYC/KYB on all parties. SDN list screening. Full compliance framework.

Insurance: Marine Cargo ~1.5% + War Risk ~3% + Warehouse ~0.5% = ~5% of cargo value, with the financier named as loss payee

Roadmap

In progress now

First Corridor and Foundation

MOU signed for a food commodity corridor into Sudan

Skyocean Sudan and Skyocean Lithuania in formation

First financed cargo under a signed Trade Finance Agreement, which is also the first production trade under real counterparty names

Platform built. The public audit catalogue publishes the SIM-003 reference audit.

In parallel

Verifiable Donation Program

A traceable donation program: donors follow their money from contribution to delivery

Partnerships with NGOs and aid organizations, in discussion

Phase 2

Retail Trade Finance

Retail participation is planned. It is not open, no mechanism is defined, and nothing is offered.

Any launch would operate under the applicable regulatory framework.

Planned

Expansion

Extend to new countries and corridors, Nigeria and Senegal among those in discussion

Each new market needs only registration as a general commodity trader and local regulatory compliance

Use of Funds & Investment

\$3M Pre-Seed Round \$15M pre-money valuation

16.7 percent of Skyocean Lithuania at a fully subscribed round.

Bootstrapped to date. Founder-owned.

Allocation

Equity is one pool of working capital deployed into the revolving trade book. Margin from those trades funds salaries, operations and platform development. There is no fixed split between operations and trading.

Equity at a Fully Subscribed \$3M Round

\$150K = 0.8%

\$250K = 1.4%

\$500K = 2.8%

\$750K = 4.2%

\$1.0M = 5.6%

Why Now

- ✓ Platform live and tested today
- ✓ Sudan MOU signed
- ✓ Identified demand in both pilot corridors
- ✓ Model generates margin from the first completed cycle

Revenue projections are based on analysis and assumptions; actual results may vary. Consultation with financial experts is advised. Pre-seed pricing: later rounds are expected to be priced above this round.

Let's Talk

Skyocean works on the \$2.5 trillion trade finance gap by owning the commodity, controlling the documents, and letting a financier fund a named cargo against both. The platform connects merchants and buyers directly, and settles each trade under the payment terms of its sales contract.

Next Steps

- 1 **Introductory meeting:** corridors, model, pipeline
- 2 **Structure discussion:** equity, trade finance, yield engine, or a combination
- 3 **Due diligence:** full data room access, platform demo
- 4 **Term sheet:** commercial terms, governance
- 5 **First trade:** capital deployed, trade cycle begins
