Skyocean

Global Trade Finance Infrastructure

A trade data platform and physical export, acting as principal

November 2026

Executive Summary

Skyocean is global trade finance infrastructure that combines a trade data platform with physical export. It buys goods from producers, ships them in its own name and owns them until the buyer pays, and its platform verifies every shipment end to end. **This lets lenders extend trade finance to underserved merchants, with the cargo as collateral, not just the receivable, wherever Skyocean has a company.**

Platform Built

Platform Status

Production ready, demonstrated end to end in published reference audits, the latest with the capital leg in the record.

5 to 8%+

Margin Per Trade

Conservative est. (45 to 75 day cycle)

€25 to 26M

Pilot Pipeline

Identified demand, first cycle

16 yrs

Founder Experience

Physical cross-border trade

Platform Highlights

- **Production ready.** Real trades run in production as soon as they are funded.
- **Owns the commodity end to end**, full supply chain control
- **Skyocean settles by bank transfer**, cash against documents or letter of credit
- **Direct merchant access**, SME and wholesale
- **Reference audits published in full** at audit.skyocean.io: SIM-006 with the capital leg (facility, draw and title transfer), SIM-005 with the custody bridge, and SIM-003

Corridor Framework and Access

Investment Encouragement Commission, Republic of Sudan

Three year MOU signed 2 April 2026

Skyocean Sudan

In formation. Consignee and importer of record in the destination market

Skyocean Lithuania

In formation. European base and contracting entity for EU financiers once incorporated

How It Works

Skyocean owns the commodity at every stage. Merchants and buyers order directly from Skyocean.

1

Buyer Orders

Merchant or buyer places an order directly with Skyocean.

2

We Procure & Ship

Skyocean buys the commodity. We retain title throughout.

3

Verified Delivery

Quality inspection. Digital verification. Cargo released against payment.

4

Returns Generated

Trade margin earned. Capital recycled to the next trade cycle.

Traditional Trade Finance

A bank lends against the borrower's balance sheet and prices the corridor by country. On a small trade in a frontier market, assessing the individual transaction costs more than the trade earns, so bank finance rarely reaches it.

Skyocean Model

Skyocean buys the commodity and holds title until the buyer pays. If the buyer defaults, Skyocean resells the cargo, so a buyer default is a resale, not a claim. Skyocean does not lend to buyers or charge them interest. A financier funds the cargo under a Trade Finance Agreement.

The Problem We Solve

$2.5 trillion
global trade finance gap

25%
of trade in West Africa is supported by trade finance (WTO and IFC)

Why Banks Cannot Close the Gap

- No supply chain visibility, betting on strangers
- Usury caps (8 to 15%) make risky trades unprofitable
- Credit assessment costs exceed profit on small deals
- Recovery rests on the borrower rather than on the goods
- Cannot price high-risk markets appropriately
- Seller payment gaps from buyer defaults

Skyocean's Approach

- We own the commodity, full supply chain control
- Pricing through trade margin, not interest rates
- Retained title turns a buyer default into a resale
- Digitally verified supply chain data for all parties
- Direct merchant access, no intermediaries needed

Verification Technology

Skyocean cross-checks each shipment's documents against each other and against the authorities that issued them. Each record is anchored, so a later change to it shows. The destination entity releases the cargo against payment into the controlled account named in the Trade Finance Agreement.

Document Verification

Skyocean fingerprints each document, such as a bill of lading, quality inspection or customs clearance, when it is recorded, and any later change breaks the fingerprint. Whether the document was genuine when issued is checked against the authority that issued it.

Independent, Anchored Records

Records are cross-checked against sources outside Skyocean's control, and each one is bound to the identifier of the party that issued it.

Controlled Settlement

The buyer pays into a collection account charged to the financier. The destination entity releases the cargo against that payment, as the Trade Finance Agreement sets out.

Why It Matters

8 attestor roles modelled end to end, each attestation anchored so Skyocean cannot alter it afterwards

24/7 global operation, no office hours

- Every action recorded, with who did it and when

This Is How We Do It. Check It Yourself.

SIM-006, our latest reference audit, after SIM-005 and SIM-003. A real trade structure with parties, figures and dates modified, computed end to end so the method can be recomputed rather than believed.

154 checks

across 16 axes, every axis applied

154 passed

0 failed, 0 discrepancies, 0 red flags

EUR 536,620

drawn under a Trade Finance Agreement, costs closed at zero variance

1

verification strength, the maximum

What was audited

A full trade cycle, end to end: milk powder from Gdańsk to Tema in six containers. 71 records across seven categories and 39 evidence records, 14 of them from external authority feeds: the port gate-ins at Gdańsk, the discharges at Tema, the carrier's departure and an independent DigiCert time stamp. The capital leg is in the record: the facility, the draw and the title transfer to the buyer against payment.

Why it can be trusted

The verdict is deterministic: no machine learning decides a check, so anyone can recompute it from the published record instead of accepting ours. Every attestation is anchored after the event it attests, 15 of 15, and the custody engagement is time-stamped by DigiCert, a trust service provider independent of Skyocean. Values are modified so the record can be public; the engine runs exactly as on a live trade.

Who We Serve & How Trades Settle

Merchants and buyers access goods directly. Skyocean settles each trade under the payment terms of its sales contract.

Who We Serve

SME Merchants

SME merchants place orders directly with Skyocean for commodities at fair market prices. Full KYC onboarding, order tracking, document access.

Wholesale Buyers

Government agencies, cooperatives and large merchants access bulk commodities with verified quality and full supply chain transparency.

Financiers

Financiers fund named cargoes, per trade or as a revolving facility, under a Trade Finance Agreement. Trade cycles run 45 to 75 days from cash out to cash in.

Settlement Methods

- Bank transfers (SWIFT, SEPA, local rails)
- Cash against documents (CAD)
- Letter of credit (LC)
- Multi-currency support (USD, EUR, GHS, etc.)

How Capital Participates

This round is equity in Skyocean Lithuania UAB. The routes beside it fund individual cargoes and do not form part of the round.

This round

€3M Equity, pre-seed

Skyocean Lithuania UAB

A shareholding in Skyocean Lithuania UAB, and in no other group company. 16.7 percent at a fully subscribed round. The equity buys cargo from one assigned pool of working capital, and each cycle returns that capital with margin on it to fund the next. Longest horizon.

Skyocean Lithuania UAB is the group headquarters and is in formation under the Lithuanian Startup Visa programme. It will hold the intellectual property and it is the only entity equity is issued in. Trade runs today through the group's registered operating companies. Revenue Skyocean Lithuania earns from its own trade and trade finance stays in Skyocean Lithuania.

Cargo level routes, outside this round

Trade Finance

Fund named cargoes, per trade on a 45 to 75 day cycle or as a revolving facility. The Skyocean borrower holds title, and the financier is repaid from the controlled account as each trade completes. See What Secures a Financed Trade.

Yield Engine and Provider Partnerships

For licensed securities firms. The structure is designed to deliver the trade finance yield into a structured product the firm wraps and distributes to its own clients under its own licence. Skyocean does not distribute to retail investors or solicit the public.

Structures can combine: equity plus trade finance in a single allocation, sized to the investor's mandate.

What Secures a Financed Trade

Who owns it

The Skyocean entity that signs the Trade Finance Agreement, in the financier's own jurisdiction: Skyocean USA for a US financier, Skyocean Lithuania for an EU financier once incorporated. It buys the cargo, owns it and the receivable, and is the borrower.

Who holds it

The destination entity, Skyocean Sudan or Skyocean Ghana, as consignee and importer of record. It holds the original bills of lading, clears the cargo, releases it against payment, and resells it if the buyer defaults, acting as agent for the borrower under an intercompany agency agreement that is notarised, consular legalised and registered in the destination country before the first financed cargo.

What the financier holds

A charge over the goods and receivables that follows the goods into their sale proceeds

The assignment of receivables and resale proceeds

The collection account the buyer pays into, charged to the financier

A direct suretyship from the destination entity

Cargo insurance as loss payee

Transport documents to its order where it requires that

If the cargo is not released

It can be held in a bonded warehouse at the port of discharge, under customs control, where import duty falls due only on clearance. From bond it is cleared by the buyer on payment, cleared by a replacement buyer after a resale under retained title, sold in bond to a buyer who clears it, or exported onward. Every exit is screened like the original buyer and paid into the same controlled account.

What the record adds

Legalisation, registration and the legal opinion decide whether the charge is enforceable. The record decides whether the facts they rest on can be shown: which containers, held by which entity for which principal, charged to which financier, since when. The schedule binding a named cargo is signed and its hash published before departure, and the terminal's gate report and the customs declaration for the same containers and seals are matched against it.

Pilot Program: Trade Corridors

Sudan and Ghana both open in the pilot, chosen because they are among the hardest markets to access. Discussions are open on further African corridors, Nigeria and Senegal among them. The same model transfers to easier corridors without modification.

SUDAN: Pilot Corridor

Commodity	Volume	Value	Source
Wheat / Flour	30,000 MT	~€12M	Turkey
Sugar	10,000 MT	~€4M	Brazil
Milk Powder	20 containers	~€1M	Poland
Sunflower Oil	40 containers	~€1.2M	Turkey
Lentils / Pasta	Mixed	~€1.3M	Turkey / Italy

Pilot cycle: ~€19 to 20M per cycle

Wheat volume is the identified monthly government requirement.

Framework: three year MOU with the Investment Encouragement Commission of the Republic of Sudan, signed 2 April 2026

Status: MOU signed. A framework for market access, not a purchase contract or payment obligation.

GHANA: Pilot Corridor

Commodity	Value	Source
Dairy / Milk Powder	~€1M	Poland
Chicken / Poultry	~€1M	Brazil / EU
Sugar	~€4M	Brazil

Pilot cycle: ~€6M · 0% tariff under EU-Ghana EPA

Established port (Tema), proven trade route

EU Gateway & Next Corridors

Port of Thessaloniki, the shortest transit to East Africa. Sofia Dry Port for rail to Central Europe. Nigeria and Senegal in discussion. Further corridors require a local company registration and compliance with that jurisdiction.

Business Model & Revenue

Trade Margins

5 to 8%+

Skyocean acts as principal. It buys at origin, sells at destination and keeps the full trade margin, net of freight, duty, inspection and insurance. It does not take a percentage of someone else's transaction.

Cost of Trade Finance

Priced per facility

Each Trade Finance Agreement sets the pricing, advance rate and tenor, per trade or for a revolving facility. The financier's cost is a charge against the trade margin, not a fee to the buyer.

Indicative Target

Licensed firms only: Sudan 16 to 21 percent, Ghana about 15 percent, gross annualised, derived from trade margins on these corridors. Not an offer, a projection or a commitment to any return. The corridor produces the trade margin, a financier's indicative return is a share of it, and Skyocean retains the balance.

Pilot Program Revenue Projections (Initial Corridors Only)

Period	Trade Volume	Trades	Revenue Est.	Milestone
Year 1: Pilot	€40M	4 to 6	€2.0 to 3.2M	First trades, prove margins, build track record
Year 2: Scale	€120M	12 to 15	€6.0 to 9.6M	Multi-corridor, 4 to 6 countries, expand pipeline
Year 3: Expand	€175 to 200M	18 to 25	€8.8 to 14.0M	Institutional partners, new regions, full scale

Revenue estimate is trade volume at the 5 to 8 per cent net margin stated above. Projections are based on analysis and assumptions, and actual results may differ.

Market Opportunity

$2.5T TAM

Global trade finance gap. ADB, 2025.

$260B SAM

EU and emerging market corridors addressable through Skyocean's network.

$52 to 65B SOM

Africa and EU corridors, initial target regions.

Commodity Focus: Agricultural Products | Essential Goods (FMCG) | Industrial Equipment | Construction Materials | Containerised Cargo

Global Reach: Pilot Numbers Represent the Launch Phase Only

Pilot corridors (Sudan + Ghana): €25 to 26M identified demand, first cycle. Identified Sudan government demand: 30,000 MT wheat per month (about €12M per month). The pipeline is institutional-scale; execution is capital-constrained, not demand-constrained.

Global platform: Pilot success validates expansion to LATAM, Asia, and additional African markets. Capital scales directly into volume.

Competitive Positioning

Capability	Skyocean	Drip Capital	Banks
Quick SME Financing	✓	✓	✗
Owns the Supply Chain	✓	✗	✗
Earns Trade Margins (not interest)	✓	✗	✗
Digital Verification & Transparency	✓	✗	✗
No SME Collateral Required	✓	✓	✗
No Interest Charged to SMEs	✓	✗	✗
Direct Merchant Access	✓	✗	✗

Key Differentiator: Competitors either lend capital (Drip Capital, banks) or run platforms that never take ownership of the goods. Skyocean owns the commodity, controls the supply chain, and earns the trade margin as principal, not interest. Failed platforms (TradeLens, Marco Polo, we.trade) did not own the value chain. We do.

Risk Management

Buyer Default

Title stays with the Skyocean borrower and the cargo is held by the Skyocean entity that can clear and resell it. A buyer default is a resale, not a claim. See What Secures a Financed Trade.

Security (Sudan)

Cleared, operational port access under current authorities. War risk plus marine cargo insurance. Egypt backup route identified.

Commodity Price

Short cycles (45 to 75 days). Essential goods with stable demand (wheat, sugar, dairy). Minimal price exposure window.

Financial / FX

Each sales contract sets its currency. Sudan trades settle in USD into the collection account charged to the financier.

Quality / Dispute

Pre-shipment inspection (SGS / Bureau Veritas). Independent surveyor. ICC arbitration clause. Digital verification.

Sanctions

Food and essential goods exempt from most sanctions. Rigorous KYC/KYB on all parties. SDN list screening. Full compliance framework.

Insurance: marine cargo, war risk and warehouse cover on every consignment, with the financier named as loss payee. Premiums sit inside the trade economics and are already reflected in the net margin.

Roadmap

In progress now

First Corridor and Foundation

MOU signed for a food commodity corridor into Sudan

Skyocean Sudan and Skyocean Lithuania in formation

First financed cargo under a signed Trade Finance Agreement, which is also the first production trade under real counterparty names

Platform built. The public audit catalogue publishes the reference audits SIM-003, SIM-005 and SIM-006; SIM-006 runs the full capital leg: facility, draw and title transfer against payment.

In parallel

Verifiable Donation Program

A traceable donation program: donors follow their money from contribution to delivery

Partnerships with NGOs and aid organizations, in discussion

Phase 2

Retail Participation

A retail participation layer is planned as Phase 2, once the company holds the EU authorisation it requires. Nothing is offered to individuals before then.

Planned

Expansion

Extend to new countries and corridors, Nigeria and Senegal among those in discussion

Each new market needs only a local company registration and local regulatory compliance

Use of Funds & Investment

€3M **Pre-Seed Round** €15M pre-money valuation

16.7 percent of Skyocean Lithuania at a fully subscribed round.
Bootstrapped to date. Founder-owned.

Allocation

Equity pays for development and buys the cargo from one assigned pool of working capital. The cargo sells and the principal returns with margin on it, so each cycle hands the next one its capital back, and runway follows trade performance rather than a burn rate.

Equity at a Fully Subscribed €3M Round

€150K = 0.8%	**€250K** = 1.4%	**€500K** = 2.8%
€750K = 4.2%	**€1.0M** = 5.6%	**€3.0M** = 16.7%

Why Now

- Production ready, demonstrated end to end in published reference audits
- Sudan MOU signed
- Identified demand in both pilot corridors
- Model returns capital with margin on each cycle

Revenue projections are based on analysis and assumptions; actual results may vary. Consultation with financial experts is advised.

Let's Talk

Skyocean is global trade finance infrastructure that combines a trade data platform with physical export. It buys goods from producers, ships them in its own name and owns them until the buyer pays, and its platform verifies every shipment end to end. This lets lenders extend trade finance to underserved merchants, with the cargo as collateral, not just the receivable, wherever Skyocean has a company.

Next Steps

1. **Introductory meeting:** corridors, model, pipeline
2. **Structure discussion:** equity, trade finance, yield engine, or a combination
3. **Due diligence:** full data room access, platform demo
4. **Term sheet:** commercial terms, governance
5. **First trade:** capital deployed, trade cycle begins
